

**National Interagency Coordination Center  
Incident Management Situation Report  
Thursday, October 31, 2019 – 0800 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (51 new fires)
New large incidents:	1
Large fires contained:	1
Uncontained large fires:***	8
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

Nationally, there are 6 large fires being managed under a strategy other than full suppression.  
\*\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

**Predictive Services Discussion:** The Foehn Wind event across California will begin to wind down today except across Southern California where the Santa Ana Winds will continue through the day before weakening this evening. Valley temperature inversions across the Columbia Basin will strengthen slightly as the stalled high pressure ridge remains centered along the West Coast. The ridge will continue to prevent wetting systems from impacting the West. So, the dry trend will continue. Warm and dry conditions will also continue across the Southwest under as weak westerly flow. With a flat westerly flow in place across the remainder of the country, the dry conditions will extend as far east as the Atlantic Coast. From the Great Lakes south to the Gulf of Mexico. Some snow shower activity will be possible across the Upper Peninsula of Michigan during the late afternoon and evening hours.

## Helicopter Landing Zone Selection

*Aviation Category*

Consider the following points when selecting a landing zone for a helicopter:

- Locate a flat area that is of sufficient size for the helicopter you are expecting to land.
  - Type I -- Clear and level touchdown pad measuring 30 feet by 30 feet; safety circle measuring 110 feet in diameter.
  - Type II -- Clear and level touchdown pad measuring 20 feet by 20 feet; safety circle measuring 90 feet in diameter.
  - Type III -- Clear and level touchdown pad measuring 15 feet by 15 feet; safety circle measuring 75 feet in diameter.
- Choose an area clear of people, vehicles, and obstructions such as trees, poles, and especially overhead wires.
- The area must be free of stumps, brush, posts, large rocks or anything over 18 inches high.
- Consider the wind direction. Helicopters land and take off into the wind.
- Choose an approach free of obstructions. Any obstruction should be relayed to the helicopter crew during initial radio contact.
- Remove or secure any loose items in and around the landing area such as trash, blankets, hats, or equipment.
- Wet down the landing area if dusty conditions are present.
